## *Professional Railings Without The Professional*

- The Amazing Rail™ is adjustable to fit any angled non-bending stairway. It can also be leveled as a balcony rail
- It is easy to assemble. With its specially designed balusters, it should take only a few minutes to gather a four to eight foot section together without any tools and around ten minutes to assemble.
- Meets national building code with insert spacing of 4 ½" center to center between balusters.
- Unlike the competition, the Amazing Rail's (™) fillets are precut and can fit between the balusters at any angle for a clean, streamlined finish.
- Amazing Rail™ is sold as K D: meaning the customer can actually change the look of their staircase just by replacing certain parts. All styles of Amazing Rail's™ hand-rails, shoe rails, and balusters can be switched in and out with ease.

- ① Handrail (sp6010) and Mould (sp6010BM),  
Shoe Rail (sp6045 )
- ② Inserts (s6050) 2 pcs
- ③ Balusters (s5141)
- ④ Fillet (s6051)
- ⑤ Supporting Strips (S6052) 2 pcs

1. Unwrap the wrap around the Handrail and take the two Moulds off. **KEEP THE MOULDS! DO NOT DAMAGE THEM!**

2. Take ONE of the Moulds and lay it vertically on the steps (or landing) against the sides of the bottoms of the two posts (or wall). The Mould should extend beyond the post.

3. Mark the angles of the top and bottom post to both ends of the Mould with a pencil.

4. Cut the Moulds along the penciled-angles using a Mitre Saw.

5. Make sure the Inserts are in the Handrail. Lay the Mould back on the side of the Handrail. The Mould should fit along the Handrail grooves perfectly. Since the Mould is cut, it is shorter than the Handrail.
6. Using the Mould as a guide, cut along the angle THROUGH the Handrail with the Insert inside.
7. Take the Inserts out of the Handrail.
8. Repeat steps 5 through 7 with the Shoe Rail.
9. Assemble Balusters into the Inserts. (Please read the separate instructions titled "Baluster Assembly").

10. Align the entire Amazing Rail™ section between the newel posts (or wall). Make sure the Balusters are plumb with the newel posts (or wall).

Fasten the Amazing Rail™ into the posts with screws. If fastening to a wall, use a Rosette (sold separately).

11. Amazing Rail™ is completely installed.

Please visit <http://youtu.be/6sBQ3eQEztQ> for video demonstration.

1. Take the Insert out of the Handrail as The Top Insert ( refer to Installation 7) and remove the Insert from Shoe Rail as The Bottom Insert.
2. Lay the Top and Bottom Inserts apart and parallel from each other and on top of a Supporting Strip. (The Inserts should have been cut by this point which means the dowel hole along the Insert MUST be placed in the exact same position as they were inside the Rails before the cuts were made).
3. Place the Balusters between the Inserts at the appropriate angle while making sure the dowels at the ends of the balusters are angled in the same direction. Also make sure the turnings match down the row and not upside down. (It is easier to fit the Balusters into the Inserts at an angle as opposed to straight vertically).

4. Once the Balusters have been set correctly between the Inserts and at an angle, fit the round dowels at the ends of the Balusters into the Insert.

5. Once all the Balusters are in the Inserts, keep the entire assembled section at an angle and on top of the Support Strip, and then press the Precut Fillets between each Baluster except over the predrilled holes at the ends of the Inserts and also at the center of the Top Insert.

6. After all Fillets have been placed, fit the Inserts (with the fitted Baluster) into their respective Rails by pressing them in firmly.

7. Set the entire Amazing Rail™ section back to a vertical position.
8. Screw in the included Screws into the predrilled holes on the Inserts so that it is firmly attached to their respective Rails.

9. Locate the predrilled hole on the flat side of the center of the Shoe Rail. Fasten a screw in there as well.

Baluster Assembly is complete.
