

LAJ Wood Products DIY Stair Rail Kit

888-700-9663

ASSEMBLY INSTRUCTIONS FOR YOUR DIY RAIL

Installation for both Rake and Level sections on [Shoe Rail](#)

PLEASE READ ENTIRE INSTRUCTIONS BEFORE ASSEMBLING

Parts Include:

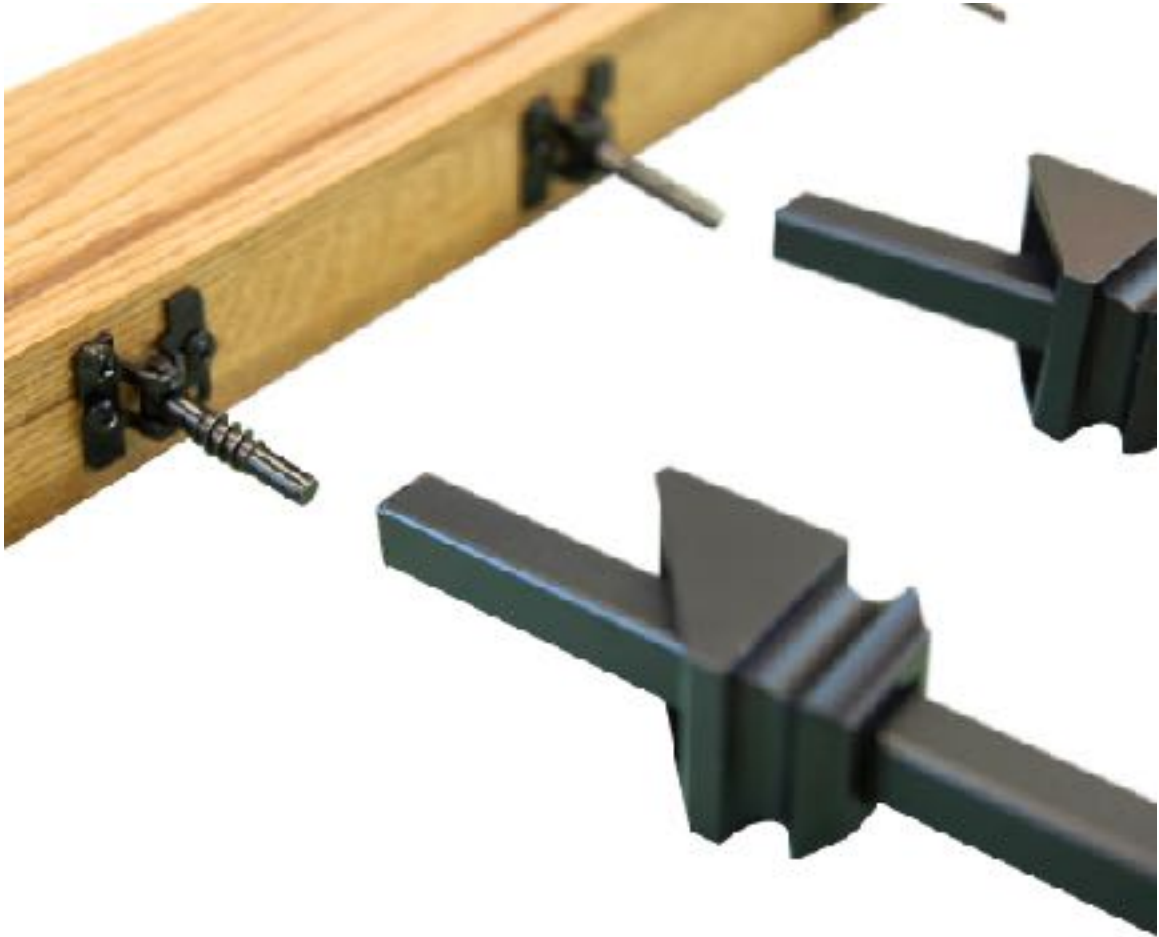

Connectors with plastic EZ mount (already installed into Handrail and Metal Balusters).

If you purchased a LEVEL section, you are provided with LEVEL SHOES:

Note how Metal Connectors are already installed into Handrail. Ends of Balusters WITHOUT CONNECTORS go to Handrail.

And vice versa: connector ends of balusters go to the Shoe Rail.

Before beginning, lay out balusters in desired pattern:

RAKE SECTIONS must make sure Rake Shoes are the same angle down the row. Top shoes and bottom shoes must run in the OPPOSITE directions.

Screw top ends of balusters into the connectors in the Handrail.

Slide the OPEN NOTCH of Connector at the bottom of the balusters to the screw in Shoe Rail.

Tighten two screws into the holes provided.

Unlock each shoe with Allen wrench and slide them flush to Handrail and Shoe Rail. Rake sections should be tilted to an angle first before setting shoe flush.

Be sure Shoes touch the Shoe Rail, then tighten with wrench.
